

BIRD ¹⁹¹³to²⁰¹³ PRECISION

100 YEARS OF PRECISION

CORPORATE PROFILE

From Waltham Watches that are still ticking after 100 years, compass bearings that have helped guide America's Cup winners, Ruby ring jewels in rate gyro's for early rocket and Luna guidance systems, Vee bearings for timing mechanisms such as parking meters that have lined the main streets of America, turbine flows instruments for the nations agricultural heartland, Bird Precision continues to keep the tiny... but important, wheels, hands and dials of the world moving.

Since 1913 Bird Precision has been the forerunner in helping design engineers solve problems relating to low friction and wear in high precision instrument components using a synthetic ruby or sapphire bearing. Bird Precision has pioneered the production of hard Pyrex spring loaded vee bearings for moving coil and analog meter movements.

Bird Precision maintains an impeccable reputation for precision component fabrication, with specialized equipment designed for economical high-speed production.

We also maintain a full complement of Swiss CNC and specialized secondary machines to provide a vertical in house production capability, enabling fast prototype and production delivery.

If you're involved in product design and production, you're always on the lookout for ways to improve the manufacture, performance and quality of your products. Now is the time to investigate the wide range of accuracy and workmanship Bird Precision supplies for miniature components and assemblies.

Join us as one of our valued customers. We will work together to improve your product through a mutual exchange of ideas, services, and quality.
